

01

Devin

Build more with Devin, the AI software engineer

02

Model agnostic by design. Prevent model provider lock in.

Value based rollout including our AI Productivity Guarantee*.

Forward deployed partnership for hands on transformation.

03

Code Migration

 Mercedes-Benz

8 days

to complete 8 months of COBOL work

200,000+ lines of legacy code analyzed and migrated.

Data Engineering

 Nubank

20x

cost savings on ETL migration

6M+ lines of code refactored. Planned for 1,000+ engineers over 18 months, completed in weeks.

Vulnerability and Bug Triage

 Itaú

70%

of security vulnerabilities automatically remediated

Devin triaged and patched vulnerabilities across thousands of repos.

QA and Testing

 Rivian-Volkswagen Technologies

10x

increase in test generation velocity

Engineers wrote 1-2 tests per day manually. With Devin, the team reached 10-15 tests per day.

Documentation

 Evinova

8x

faster regulatory documentation

35-40 hrs of regulatory documentation reduced to 5-10 min first drafts at 90% accuracy.

Product Development

 Gumroad

#1

code contributor in 5 of 7 most active repos

1,500+ PRs merged with an 85% merge rate. ~10 PRs merged by Devin daily.

06

Devin Differentiators

Model Agnostic by Design	Devin is a compound AI system that accesses every frontier model in one platform, preventing vendor lock-in. Tasks are routed to the best fit model.
Optimized for Value Generation	Pay for value, not activity Devin's industry first \$10M AI Productivity Guarantee ties spend directly to measured engineering value. Sessions are categorized by type of work, converted to human-equivalent hours, and verified at year-end. If value falls short, Cognition funds the gap up to \$10M. Intelligence optimized for costs Devin continuously improves the cost for outcomes. For example, Devin Fusion, a new multi-model harness, delivers ~35% better cost-efficiency while maintaining frontier performance.
Forward Deployed Transformation Partner	Dedicated Forward Deployed Engineers Forward Deployed Engineers co-own business outcomes with customers. Devin teams provide white glove onboarding, onsite enablement, and structured measurement of ROI.
Cloud Agent Maturity	Move from augmenting individuals to multiplying teams. Delegate work to fleets of parallel agents in secure, isolated Linux and Windows environments that complete the full verification loop, with knowledge that compounds across teams.
Enterprise Security and Governance	Trusted by 8 of the 10 largest US Banks Security: data encrypted in transit and at rest, CMK and private networking available. Data Ownership & Residency: inputs and outputs are the customer's IP, attribution filtering is available, no training on enterprise customer data by default. Governance: fine grained access, spend, and RBAC via custom roles and orgs, comprehensive audit logs, and multiple deployment options.

07

Devin’s Resume Continued		
Technical Debt Burndown	Application Modernization	DevOps Automation
 Ramp 10k+ hours saved each month on rote tasks Devin builds internal tools like a feature-flag removal tool, resolves Airflow errors automatically, and fixes hundreds of tests.	 AngelList 5.2x faster Redshift to Snowflake migration 1 data engineer and 20 Devin agents migrated 14,000 analytics cards in 3 weeks.	 Bilt 10 engineers’ worth of work product every week Devin investigates logs, identifies root cause, and drafts fixes for review using the team's playbook to rapidly address production issues.
